DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 19 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 19 claims both an apparatus and a method of using the apparatus. Therefore, the claim is indefinite under 35 U.S.C. 112, second paragraph. See MPEP 2173.05(p)(II) citing *Ex parte Lyell*, 17 USPQ2d 1548 (Bd. Pat. App. & Inter. 1990) (a claim directed to an automatic transmission workstand and the method steps of using it was held to be ambiguous and properly rejected under 35 U.S.C. 112, second paragraph).

Moreover, claim 19 is indefinite for failure to set forth the steps of the claimed method of use.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 19 rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim is directed to neither a "process" nor a "machine," but rather embraces or overlaps two different statutory classes of invention set forth in 35 U.S.C. 101 which is drafted so as to set forth the statutory classes of invention in the alternative

only. See MPEP 2173.05(p)(II) citing Ex parte Lyell, 17 USPQ2d 1548 (Bd. Pat. App. & Inter. 1990) at 1551.

Allowable Subject Matter

4. Claims 1-18, 20 are allowed.

5. The following is a statement of reasons for the indication of allowable subject matter: Prior art of record do not teach or suggest an imaging system/method comprising a light modulator having the characteristics as claimed for varying the resolution of halftone reproduction using light valves with fixed dimensions without using optical or mechanical movement. By rotating the light valve array with respect to the direction of transport of the recording medium, resolution can be increased.
